

Sports Events App

The project proposes to find solutions that allow the people who are passionate about sports to organize and participate in various sports events. Thus, organizing sport activities will be easier, more efficient and better planned. The application should also promote the interaction between the sport lovers.

The application will offer the following features:

1. The user should be able to create a new sport event, specifying relevant details regarding the activity: the type of activity (e.g. soccer, running, hiking), the date and time, the exact location, special equipment if needed and other special details which may be significant.
2. The user should be able to see a list of the events created. For each event, only the type of activity, the time and the location will appear in the list. If the user selects a certain event, a page with all the details corresponding to the respective event will be displayed.
3. The user should be able to change the details of an event (e.g. if the location of an event has changed, the user will also be able to change it in the application, in order to be visible for the other users).
4. The user should be able to delete the events which are no longer going to be held.

While offline the application will perform the following actions:

1. The user will be able to create a new sport event, but it will be available to other users only when the application goes online.
2. The user will be able to see all the sport activities that were available the last time he/she was online. If an event is created by another user, while the current user is offline, the event will become available for the current user only when he/she goes online.
3. The user can not make any change to the events. A message which alerts the user will be displayed.
4. The user cannot delete any event. A message which alerts the user will be displayed.
